JOHNNY WONDER

Q. "HOW DO SNAILS MOVE?"

BEN STEWART, OF MARINETTE, WI., WINS A PRIZE FOR THIS QUESTION.

A. A small moves around by creeping on a part of its body that seems to be its stomach. The fact is that the whole bottom part of a snail's body is really a broad foot! The muscles in the snail's foot move in a rippling motion that slowly pushes the snail forward. As the snail crawls from place to place, it pours out a trail of slime, or mucus. This gooey trail smooths the way for the snail and helps it to cling to walls and other surfaces as it crawls up and down over objects in its path. The common garden snail creeps along at a snail's pace of about six inches a minute. You can win a World Almanac if your question is selected. Send your name and age to JOHNNY WONDER, c/o this newspaper, P.O. Box 1338, (DA) Santa Cruz, CA 95061.
